

Threat Intelligence

AI-Based Threat Intelligence Platform

Offline demo mode
(enrichment, AI analysis).

Values are generated locally
and are not real threat
intelligence.

Indicators analysed

131

Active alerts

24

Model accuracy

0.7257

Model trained on synthetic data.
Accuracy shows that the training pipeline
works, not real-world performance.

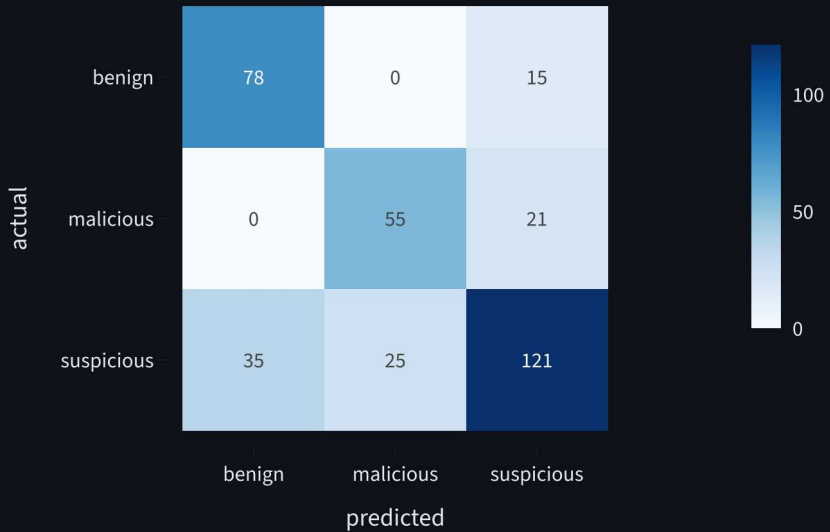

Detection model

These metrics come from synthetic training data. Labels were generated by a documented rule in `make_sample_data.py` plus random noise. The figures show that the training and evaluation pipeline works. They are **not** real-world detection performance and must not be presented as such.

Accuracy F1 (macro) CV F1 (5-fold) Training records

0.7257 0.7261 0.7575 1400

Confusion matrix (rows = actual, columns = predicted)

Classification report

class	precision	recall	f1-score	support
benign	0.69	0.839	0.757	93
malicious	0.688	0.724	0.705	76
suspicious	0.771	0.669	0.716	181
macro avg	0.716	0.744	0.726	350
weighted avg	0.731	0.726	0.725	350

Pipeline modes

- Enrichment: OFFLINE DEMO MODE - reputation values are generated locally and are not real threat intelligence.
- AI analysis: OFFLINE MODE - explanations are generated deterministically from pipeline output; no language model is called.
